

Educational program “Artificial lighting in Renaissance castle”

Within the framework of the project “Historical Route: Raudondvaris–Bauska”, the premises of Bauska Castle have been enriched with replicas of 17th century lightings, which are placed in various exhibition rooms of the castle.

Lighting plays an important role in understanding the daily life of the inhabitants of the Renaissance castle and the possibilities provided by the artificial lighting of the time. During the thematic programme, it will be possible to get acquainted with the types of artificial lighting in Renaissance castles, and their use according to the function of the room – chandeliers, lanterns, candleholders. Experience the sensations of moving around the castle in the dark, under historical lighting and try your hand at practical work by candlelight.
